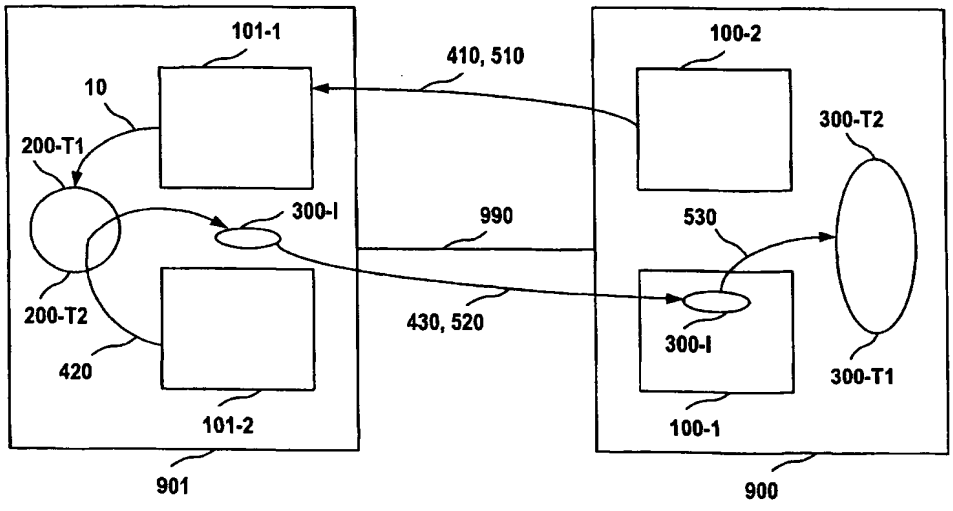
(54) Title: METHOD AND COMPUTER SYSTEM FOR HANDLING INCREMENTAL DATA IN CLIENT-SERVER COMMUNICATION



(57) Abstract: A server-controller (101-1) on a server (901) receives (410) a modification-request generated by a client-controller (100-2) of a client (900) to modify an original model (200-T1) of an application component that is stored on the server (901) into a modified model (200-T2). A server-renderer (101-2) generates (420) at least one browser-increment (300-I) that corresponds to the difference between the original model (200-T1) and the modified model (200-T2). A client-assembler (100-1) receives the at least one browser-increment (300-I) from the server (901) and updates at the client (900) an original DOM component (300-T1) that corresponds to the original model (200-T1) with the at least one browser-increment (300-I), resulting in a modified DOM component (300-T2) that corresponds to the modified model (200-T2).
